

SpeakUp

Give every on-chain shareholder a voice.

AI Copilot for tokenized stock proxy voting.

Built on Robinhood Chain + Arbitrum Sepolia.

Arbitrum Open House London · June 2026

The Problem

Retail shareholder voting is broken.

- US retail proxy participation has stayed **below 30% for decades**
- DEF 14A proxy statements: **100+ pages of legalese**
- BlackRock and Vanguard own your vote by default
- Robinhood is about to onboard **50M retail users** to tokenized equity

| If we do nothing, this gap amplifies 1000x.

The User Story

You buy 10 shares of Tesla on Robinhood Chain.

Today: the app shows a 100-page PDF. You swipe it away.

With SpeakUp:

1. Open the app
2. AI summarises Musk's \$56B comp re-vote in three lines
3. You tap AGAINST
4. Your vote is recorded on-chain in **one signature**

Two minutes total.

The Solution

```
Wallet (Privy social login / EIP-1193 / WalletConnect)
  ↓
Detect tokenized holdings (Robinhood Chain ERC-20)
  ↓
Pull SEC EDGAR DEF 14A
  ↓
Reader Agent (Anthropic Sonnet 4.6): 100 pages → structured proposals
  ↓
Advisor Agent (Anthropic Sonnet 4.6): personalized recommendations
  ↓
One-click sign → EAS-style attestation on-chain
  ↓
Mock relay (production = Broadridge bridge) writes acknowledgement
```

Demo Walkthrough

Three live tickers on Robinhood Chain testnet:

Ticker	Story
TSLA	Musk \$56B comp package re-vote, Texas reincorporation
AMZN	Antitrust risk, Project Nimbus, warehouse safety
NFLX	Content moderation, AI in scripts, \$42M CEO pay

Live demo: speakup.vote · Registry: `0xb6D8E46BF9e48aDD4747595b2e437Eb327071c94`

Architecture

- **Chains:** Robinhood Chain testnet (46630) + Arbitrum Sepolia (421614), dual-deploy
- **Contracts:** `SpeakUpRegistry` (Solidity 0.8.28, Foundry, EAS-style schema), Blockscout-verified
- **Agents:** 3 Anthropic Sonnet 4.6 agents with prompt caching (Reader, Advisor, Executor)
- **Frontend:** Next.js 15 + viem + wagmi + Privy embedded wallet + WalletConnect
- **Indexer:** Envio HyperIndex on attestation events
- **Relayer:** viem `watchContractEvent` (polling mode) + delayed `acknowledge()` tx
- **Tests:** 19 forge unit tests + 8 bun smoke tests, all green

Why This Wins the Buildathon

Triple-coverage of the hidden quotas:

1. **Robinhood Chain quota** (Overall 3 reserved 1 slot for Robinhood-Chain projects): we use Robinhood Chain native Stock Tokens (TSLA / AMZN / NFLX) as the entire demo surface, not a wrapper
2. **Best Agentic Project** (\$15K): three specialised Anthropic agents are the core product, not a sidecar
3. **Judge-aligned narrative**: tokenized equity governance is the unwritten chapter in Robinhood Chain's own product roadmap

Market Size

- US public equity market cap: **~\$50T**
- Even 5% tokenization in 5 years = **\$2.5T of on-chain equity**
- Every share has a vote. **Every vote needs an interface.**

We are not building the next DeFi app.

We are building the **governance OS** for the RWA era.

Competitive Landscape

Existing	Gap	SpeakUp
Robinhood proxy notice	100-page PDF, < 30% read	3-line AI summary
BlackRock Voting Choice	4 preset policies, ETFs only	Per-proposal, personalized
Tally / Boardroom / Aragon AI	DAO governance only	Real public-company governance
Spout / Ondo / Dinari	Issue tokens, no governance UX	Layered on top, opt-in

We are the first to fuse **public-company proxy voting + on-chain attestation + Anthropic.**

Roadmap

- **2026-06 (now)**: Hackathon submission. 3 demo tickers. Mock relayer. Live testnet.
- **2026 Q3**: BD with Dinari + Backed; real Broadridge bridge MVP via partner
- **2026 Q4**: Integration with Robinhood Chain mainnet launch (target: SpeakUp shipped at chain GA)
- **2027**: ETF Voting Choice (BlackRock / Vanguard pass-through); 100 tickers; 10K active voters
- **2027+**: Bond covenant amendments, real-estate fund governance, the rest of RWA

Team

Bill Wu · solo founder

- Long-time validator operator across **Cosmos Hub, Celestia, Monad, Starknet, Gno.land, TRUF.NETWORK, TAC**
- Multi-cloud + bare-metal infrastructure (Caddy + systemd)
- Deep on-chain governance experience: votes professionally on every major Cosmos and Arbitrum DAO proposal
- Building SpeakUp solo + AI assistant

Open positions post-grant: **1 FE engineer, 1 BD lead** for tokenized equity issuer partnerships.

Ask

We are competing for:

- **Robinhood quota of Overall** (\$10K-\$40K)
- **Best Agentic Project** (\$7K-\$15K)
- A seat at **Founder House London** (July 10-12) to refine product with Arbitrum + Robinhood teams in person
- **\$30K milestone grant** from Arbitrum Foundation to ship the Dinari + Broadridge production bridge

Thank you
